XIR100H

XIR200H, XDT200H,
XDT200HM, XTT200H

The Xline series volumetric motion detectors are especially suitable for professional indoor applications.

They are provided with a perfect combination of high sensitivity and an ultra-low false alarm rate. The use of digital processing of the signals from sensors and the latest extremely-stable signal amplification and filtering technology allows these devices to respond efficiently to intrusion in the protected area and to deliver superior catch performance and precision.

XIR100H, XIR200H

XIR100H and XIR200H are passive infrared detectors that use a dual pyroelectric element capable of detecting infrared radiation.

XDT200H, XDT200HM

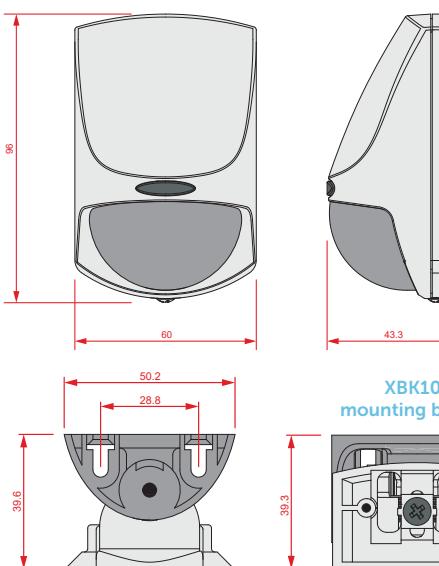

The dual technology detectors from the Xline series combine infrared and microwave detection using a dual element PIR and a X band microwave element.

XTT200H

The XTT200H combines two dual element PIR and a X band microwave element. It operates as a dual technology detector but is capable of processing three types of input signals. It provides two operating modes, standard and digital.
